PROFESSIONAL SUMMARY

Fresher Software Developer specializing in cross-platform application development using React and Tauri, with hands-on experience building and deploying production-ready applications. Strong background in automation using Python and cloud integration (AWS, Supabase). Experienced in deploying production-ready applications with real users, focusing on performance optimization, efficient architecture, and seamless user experience.

TECHNICAL SKILLS

Languages: Python, Java, SQL, Rust

Frontend: React

Backend & Database: Supabase, PostgreSQL

Cloud: AWS, Azure

Tools & DevOps: Git, GitHub, GitHub Actions, Jenkins

Frameworks & Tools: Tauri, Capacitor

PROJECTS

SpendScrub – Cross-Platform Finance App

- Built an offline-first personal finance application using React and Tauri, deployed on Microsoft Store with 200+ active users
- Developed "The MagicBar," an NLP-based engine for conversational transaction logging, reducing user manual entry time by 60% and enabling fast, sub-300ms UI interactions.
- Architected a real-time analytics dashboard capable of smoothly handling 1,000+ transactions, and optimized overall application size by 60% compared to traditional Electron alternatives.
- **Tech Stack:** React, Rust (Tauri), Capacitor, Supabase, GitHub Actions.

ToolSuite – Multi-Utility Automation Platform

- Built a privacy-focused desktop utility platform using Electron and a Python backend, integrating tools like screen recording, PDF processing, image compression, and file organization into a single offline-first application, reaching **100–300 active users**
 - Designed a modular processing engine (FastAPI) to handle file operations, media processing, and analytics, enabling efficient bulk handling of **500+ files per session** with optimized performance
 - Developed and optimized key modules using OpenCV and Pandas, reducing manual workflow effort by ~50% while improving execution speed and lowering CPU overhead
 - **Tech Stack:** Electron, Python, GitHub Actions.
- GitHub: [Tool-suite repo](#) | Live: [Microsoft Store](#)

Automated Expense Pipeline

- Developed a scalable Python data pipeline to automatically ingest, clean, and categorize raw financial inputs into structured datasets.
- Engineered robust parsing logic capable of processing 10,000+ records with high accuracy, reducing manual data entry efforts by 70%.
- Designed a modular architecture that seamlessly integrates transformed data into downstream analytics dashboards for real-time tracking
- **Tech Stack:** Python, Data Automation, Jenkins

EXPERIENCE

Cloud Intern | Journallab LLP | June 2025 – July 2025

- Developed a Python-based enterprise automation tool leveraging the Google Drive API and OAuth 2.0 to securely manage, authenticate, and synchronize cloud file operations.
- Engineered metadata-driven organization logic and an interactive workflow that automated bulk file uploads (100+ files per session) and intelligent folder categorization.
- Streamlined end-to-end document management, reducing manual file sorting and upload efforts by 60% while ensuring high system reliability.

EDUCATION

Bachelor of Computer Applications (BCA) in Cloud Computing – Kristu Jayanti College (2026)

XII (PUC) – St Joseph's Pre university college (2023)

X (ICSE) – St John's High School (2021)

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- ISC2 Cybersecurity
- AWS Solutions Architect
- Oracle Cloud Infrastructure Foundations
- AWS Well-Architected Foundations
- NASSCOM Digital Engineering
- IBM Getting Started with AI
- Infosys Python Foundation Certification
